

SATVIK KESARWANI

AI Engineer / Full-Stack Development / AI-Assisted Engineering

+91 97941 82032 | satvikk005@gmail.com | linkedin.com/in/sxtvikk | github.com/satvikkesarwani

PROFESSIONAL SUMMARY

Computer Science undergraduate at IIIT Pune with hands-on experience designing and developing AI-powered applications using Python, FastAPI, React, Next.js, and modern web technologies. Experienced in building Large Language Model (LLM) applications, Retrieval-Augmented Generation (RAG) systems, AI workflows, and REST APIs through internships and production-oriented projects. Skilled in applying structured prompt engineering with Claude, Codex, and modern AI-assisted development tools to analyse existing systems, accelerate implementation, automate engineering workflows, and improve software quality. Passionate about rapidly prototyping AI solutions, solving real-world engineering problems, and building reliable, scalable applications through strong software engineering fundamentals and cross-functional collaboration.

EDUCATION

Indian Institute of Information Technology, Pune
Bachelor of Technology in Computer Science and Engineering

Aug. 2023 – Jun. 2027
CGPA: 8.57/10

EXPERIENCE

AI Engineer Intern

Ascend Law Firm

Jun. 2026 – Present

Remote

- Took ownership of the Sales AI workstream, proposed and implemented a RAG-based approach to improve chatbot response relevance, and collaborated with engineers and legal stakeholders to incorporate feedback, validate the approach, and resolve defects in the existing codebase.
- Developed case-intake, categorisation, status-tracking, document-organisation, and lifecycle workflows for an AI-integrated legal case management platform.
- Built RAG-based assistants that retrieve information from the firm's internal knowledge base and generate context-grounded responses for legal teams.
- Applied structured prompt engineering with Claude and Codex to analyse an existing codebase, break implementation requirements into manageable tasks, accelerate feature development, debug integration issues, generate regression tests, and automate repetitive engineering workflows.

AI Intern

IndianCapital and Investment (CBE) Ltd.

Dec. 2025 – Feb. 2026

Remote

- Owned MongoDB database management and the implementation of LLM-integrated pipelines that cleaned, structured, and analysed unstructured company data; collaborated with team members to align data schemas and convert outputs into organised insights for downstream workflows.
- Engineered Python data-extraction pipelines for YouTube and Reddit content across 70+ channels, integrating MongoDB storage and DigitalOcean deployment.
- Built Google Vertex AI and Google ADK workflows to process extracted content, generate structured insights, automate response generation, and support data-visualisation workflows.
- Leveraged structured prompt engineering with Claude and Codex to implement new pipeline modules, refactor existing components, automate data validation, troubleshoot MongoDB integration issues, and verify implementation quality before deployment.

HACKATHON EXPERIENCE

Nomura KakushIN 10.0 – National Fintech Hackathon

Top 10 Finalist | 1 of 32 Teams Selected from 1,000+ Entries | Mumbai

Jul. 2026

- Collaborated with my teammate to translate an open-ended fintech problem statement into a focused development, testing, and demonstration plan under strict timelines.
- Leveraged organiser-provided Claude Sonnet 4.6 to accelerate requirement analysis, implementation planning, debugging, test generation, and iterative development while manually reviewing all generated code.
- Coordinated rapid scope and engineering trade-offs to deliver a functional MVP and jointly presented the product, technical decisions, limitations, and deployment potential to the evaluation panel.

TECHNICAL SKILLS

Languages

Python, JavaScript, SQL, C++

Full-Stack

React.js, Node.js, Express.js, FastAPI, REST APIs, PostgreSQL, SQLite

AI-Assisted Development

Claude, Codex, Antigravity, Structured Prompt Engineering

Generative AI & Applied AI

LangChain, LangGraph, RAG, Google Vertex AI, FAISS, ChromaDB, Pandas, Scikit-learn

Soft Skills

Problem Solving, Collaboration, Stakeholder Communication, Requirement Analysis, Independent Execution, Time Management, Technical Communication, Rapid Prioritisation

PROJECTS

RepoToResume – GitHub-Powered ATS Resume Automation Platform

Next.js 14, TypeScript, React, PostgreSQL, Prisma, NextAuth, GitHub API, Puppeteer, Playwright, Vitest, AWS EC2

- Built a full-stack platform that authenticates users through GitHub, analyses repository metadata and README content, extracts technical skills, and extracts repository metadata and technical skills to generate ATS-oriented, editable resume content.
- Implemented job-description parsing, repository relevance scoring, skill-gap analysis, resume management, ATS-oriented content generation, and PDF and Canva export workflows.
- Developed GitHub OAuth authentication, JWT-based sessions, protected routes, PostgreSQL persistence with Prisma, external API integrations, and an EC2-compatible Puppeteer PDF workflow.
- Added Playwright and Vitest validation, configured GitHub Actions for linting, TypeScript checks, and production builds, and delivered the initial working MVP within **3 days** before completing deployment and reliability improvements.

ArthaSaathi 2.0 – Financial Literacy and Scam-Detection Platform

Python, FastAPI, LangGraph, SQLAlchemy, SQLite, React, Vite

- Built a mobile-first fintech platform for rural and underserved Indians, covering scam detection, financial-health assessment, government-scheme discovery, verification, simulations, and personalised guidance.
- Implemented a 13-workflow system with deterministic engines for scam-risk scoring, scheme matching, financial-health assessment, and personalised 30/90-day financial roadmaps.
- Reduced selected workflows from approximately **5 LLM calls to 2** through intent-based fast paths.
- Validated routing, scoring, and deterministic rule outputs through 52 offline tests.

Medical Report Simplifier – RAG-Based Healthcare Assistant

Python, FastAPI, React, Tesseract OCR, SciSpacy, FAISS, Sentence Transformers, NVIDIA NIM

- Built a healthcare assistant that converts PDF and image-based medical reports into patient-friendly explanations using OCR, clinical NLP, semantic retrieval, and context-grounded generation.
- Developed report-upload, OCR, medical-entity processing, retrieval, and explanation workflows through a FastAPI backend and React frontend, including handling for image-based and text-based reports.

ACHIEVEMENTS

- Secured **6th Place** at the **Swafinix AI Agent Hackathon**.
- Reached the **Finalist** stage at **VoidHacks 7.0** and the **SRM Reimagining Urban Mobility Hackathon**; ranked in the **Top 20** at the **TRUSTAI Ideathon, IIIT Pune**.
- Achieved a **CodeChef 3-Star** rating and solved **300+** algorithmic problems across competitive-programming platforms.
